- Three entry points is the floor.
- Two levels of branching per entry is the floor.

USE TIPS

- Start at the entry point that matches the symptom.
- Answer the yes/no questions.
- Take the action at the leaf.

REMEMBER

Root cause > Symptom.
Verify assumptions.
Check the blast radius.

LEGEND

Mismatch: The output or behavior is not what the spec implies.

Intermittent: The test passes sometimes and fails sometimes.

Contract Change: Public interface or data contract changed.

Scope Drift: Change is larger/broader than the PR intent.

PRINCIPLE: Triage is about the next best action, not the perfect answer.
